A New Look at the Solar System Ian Niall Rankin

A New Look at the Solar System is a book of vital importance of our species. Drawing on a staggering range of references across disciplines including geology, astronomy, archaeology and palaeontology, Ian Rankin outlines his radical ideas about the world's past. Contrary to conventional scientific thinking, the evidence he has examined has convinced him that the history of our planet is not one of gradual change, as proposed by Darwin's theory of evolution, but a story of successive, yet systematic, global catastrophes that have wiped almost all trace of previous civilisations from the face of the Earth. These catastrophes, known as pole shifts, derive from the unstable nature of the solar system, which is the subject of the book's second part. Ian Rankin takes issue with Newton's theory of gravity, deeming it inadequate to explain the unwavering motion of the planets over billions of years. Instead, he proposes a New Theory, in which the Sun is not the centre of the solar system, but is itself revolving around a Magnetic Centre, a black hole, as yet undiscovered, whose powerful magnetic pull opposes the constant push of the solar wind to the outer reaches of the system. A New Look at the Solar System will fascinate not only lovers of catastrophe theories, but also anyone open-minded enough to entertain radical ideas about the nature of the universe. Its ideas are so groundbreaking they deserve the widest possible attention.
