Magnetospheric Plasma Physics: The Impact of Jim Dungey's Research (Astrophysics and Space Science Proceedings)

Magnetospheric Plasma Physics: The Impact of Jim Dungey's Research (Astrophysics and Space Science Proceedings)

This book makes good background reading for much of modern magnetospheric physics. Its origin was a Festspiel for Professor Jim Dungey, former professor in the Physics Department at Imperial College on the occasion of his 90th birthday, 30 January 2013. Remarkably, although he retired 30 years ago, his pioneering and, often, maverick work in the 50's through to the 70's on solar terrestrial physics is probably more widely appreciated today than when he retired.

Dungey was a theoretical plasma physicist. The book covers how his reconnection model of the magnetosphere evolved to become the standard model of solar-terrestrial coupling. Dungey's open magnetosphere model now underpins a holistic picture explaining not only the magnetic and plasma structure of the magnetosphere, but also its dynamics which can be monitored in real time. The book also shows how modern day simulation of solar terrestrial coupling can reproduce the real time evolution of the solar terrestrial system in ways undreamt of in 1961 when Dungey's epoch-making paper was published.

Further contributions on current Earth magnetosphere research and space plasma physics included in this book show how Dungey's basic ideas have remained explanative 50 years on. But the Festspiel also introduced some advances that possibly Dungey had not foreseen. One of the contributions presented in this book is on the variety of magnetospheres of the solar system which have been seen directly during the space age, discussing the variations in spatial scale and reconnection time scale and comparing them in respect of Earth, Mercury, the

giant planets as well as Ganymede.

From reader reviews:

Sharon Bufkin:

Now a day people who Living in the era where everything reachable by match the internet and the resources included can be true or not need people to be aware of each data they get. How individuals to be smart in obtaining any information nowadays? Of course the reply is reading a book. Studying a book can help people out of this uncertainty Information mainly this Magnetospheric Plasma Physics: The Impact of Jim Dungey's Research (Astrophysics and Space Science Proceedings) book since this book offers you rich facts and knowledge. Of course the knowledge in this book hundred per cent guarantees there is no doubt in it everbody knows.

Ruby Pritchett:

Playing with family in a very park, coming to see the water world or hanging out with good friends is thing that usually you could have done when you have spare time, subsequently why you don't try point that really opposite from that. One activity that make you not experience tired but still relaxing, trilling like on roller coaster you are ride on and with addition of knowledge. Even you love Magnetospheric Plasma Physics: The Impact of Jim Dungey's Research (Astrophysics and Space Science Proceedings), you could enjoy both. It is very good combination right, you still would like to miss it? What kind of hang-out type is it? Oh occur its mind hangout fellas. What? Still don't buy it, oh come on its named reading friends.

Catherine Hudson:

Magnetospheric Plasma Physics: The Impact of Jim Dungey's Research (Astrophysics and Space Science Proceedings) can be one of your beginning books that are good idea. Most of us recommend that straight away because this publication has good vocabulary which could increase your knowledge in vocab, easy to understand, bit entertaining but delivering the information. The author giving his/her effort to place every word into pleasure arrangement in writing Magnetospheric Plasma Physics: The Impact of Jim Dungey's Research (Astrophysics and Space Science Proceedings) although doesn't forget the main level, giving the reader the hottest in addition to based confirm resource info that maybe you can be one of it. This great information can certainly drawn you into brand-new stage of crucial imagining.

Wanda Davis:

What is your hobby? Have you heard that question when you got college students? We believe that that query was given by teacher on their students. Many kinds of hobby, Every person has different hobby. And also you know that little person similar to reading or as examining become their hobby. You must know that reading is very important along with book as to be the point. Book is important thing to increase you knowledge, except your own personal teacher or lecturer. You discover good news or update with regards to something by book. Many kinds of books that can you take to be your object. One of them are these claims Magnetospheric Plasma Physics: The Impact of Jim Dungey's Research (Astrophysics and Space Science

Proceedings).
