Right from the start of their nursing programme it is crucial for nursing students to be able to understand and evaluate current research to support their learning. This book helps students recognise what good research is by providing an introductory guide to the main research methodologies used in nursing. It simplifies complex terminology and puts research into context for nursing students, with clear examples and case studies. The second edition of this popular book includes a new chapter explaining the different ways students use research during their programme and in practice, guidance on critiquing research and literature reviews, new case studies from each field of practice, a clearer colour text design and a website with downloadable materials for lecturers to use to support their teaching.
