Building Automated Trading Systems: With an Introduction to Visual C++.NET 2005 (Financial Market Technology) Benjamin Van Vliet

Over the next few years, the proprietary trading and hedge fund industries will migrate largely to automated trade selection and execution systems. Indeed, this is already happening. While several finance books provide C++ code for pricing derivatives and performing numerical calculations, none approaches the topic from a system design perspective. This book will be divided into two sections-programming techniques and automated trading system (ATS) technology-and teach financial system design and development from the absolute ground up using Microsoft Visual C++.NET 2005. MS Visual C++.NET 2005 has been chosen as the implementation language primarily because most trading firms and large banks have developed and continue to develop their proprietary algorithms in ISO C++ and Visual C++.NET provides the greatest flexibility for incorporating these legacy algorithms into working systems. Furthermore, the .NET Framework and development environment provide the best libraries and tools for rapid development of trading systems.

The first section of the book explains Visual C++.NET 2005 in detail and focuses on the required programming knowledge for automated trading system development, including object oriented design, delegates and events, enumerations, random number generation, timing and timer objects, and data management with STL.NET and .NET collections. Furthermore, since most legacy code and modeling code in the financial markets is done in ISO C++, this book looks in depth at several advanced topics relating to managed/unmanaged/COM memory management and interoperability. Further, this book provides dozens of examples illustrating the use of database connectivity with ADO.NET and an extensive treatment of SQL and FIX and XML/FIXML. Advanced programming topics such as threading, sockets, as well as using C++.NET to connect to Excel are also discussed at length and supported by examples.

The second section of the book explains technological concerns and design concepts for automated trading systems. Specifically, chapters are devoted to handling real-time data feeds, managing orders in the exchange order book, position selection, and risk management. A .dll is included in the book that will emulate connection to a widely used industry API (Trading Technologies, Inc.'s XTAPI) and provide ways to test position and order management algorithms. Design patterns are presented for market taking systems based upon technical analysis as well as for market making systems using intermarket spreads.

As all of the chapters revolve around computer programming for financial engineering and trading system development, this book will educate traders, financial engineers, quantitative analysts, students of quantitative finance and even experienced programmers on technological issues that revolve around development of financial applications in a Microsoft environment and the construction and implementation of real-time trading systems and tools.

* Teaches financial system design and development from the ground up using Microsoft Visual C++.NET 2005.

* Provides dozens of examples illustrating the programming approaches in the book

* Chapters are supported by screenshots, equations, sample Excel spreadsheets, and programming code

From reader reviews:

Stacey Smith:

Now a day people that Living in the era exactly where everything reachable by match the internet and the resources included can be true or not need people to be aware of each information they get. How a lot more to be smart in receiving any information nowadays? Of course the answer then is reading a book. Looking at a book can help individuals out of this uncertainty Information specially this Building Automated Trading Systems: With an Introduction to Visual C++.NET 2005 (Financial Market Technology) book because this book offers you rich facts and knowledge. Of course the details in this book hundred pct guarantees there is no doubt in it you may already know.

Alice Prahl:

Spent a free a chance to be fun activity to perform! A lot of people spent their sparetime with their family, or their particular friends. Usually they undertaking activity like watching television, planning to beach, or picnic in the park. They actually doing same task every week. Do you feel it? Do you wish to something different to fill your own personal free time/ holiday? Can be reading a book might be option to fill your free of charge time/ holiday. The first thing you will ask may be what kinds of reserve that you should read. If you want to consider look for book, may be the reserve untitled Building Automated Trading Systems: With an Introduction to Visual C++.NET 2005 (Financial Market Technology) can be good book to read. May be it is usually best activity to you.

Michael Fischer:

This Building Automated Trading Systems: With an Introduction to Visual C++.NET 2005 (Financial Market Technology) is great guide for you because the content that is certainly full of information for you who have always deal with world and still have to make decision every minute. This particular book reveal it data accurately using great organize word or we can state no rambling sentences within it. So if you are read the item hurriedly you can have whole info in it. Doesn't mean it only provides you with straight forward sentences but tricky core information with attractive delivering sentences. Having Building Automated Trading Systems: With an Introduction to Visual C++.NET 2005 (Financial Market Technology) in your hand like keeping the world in your arm, details in it is not ridiculous one. We can say that no book that offer you world throughout ten or fifteen minute right but this publication already do that. So , it is good reading book. Hi Mr. and Mrs. occupied do you still doubt that?

Stephanie Landa:

Many people spending their moment by playing outside with friends, fun activity with family or just watching TV all day long. You can have new activity to pay your whole day by reading through a book. Ugh, do you think reading a book will surely hard because you have to use the book everywhere? It fine you can have the e-book, having everywhere you want in your Smart phone. Like Building Automated Trading

Systems: With an Introduction to Visual C++.NET 2005 (Financial Market Technology) which is finding the e-book version. So , why not try out this book? Let's observe.
